

**ADHESIVE MIXTURE FOR BONDING FLUOROHYDROCARBON
FILM TO FIBROUS CEMENTITIOUS MATERIALS**

Abstract of the Disclosure

An adhesive composition adapted to bond a fluorohydrocarbon film to a substrate for exterior applications, such as roofing, panels, siding, trim, and the like. The adhesive mixture generally comprises a one component moisture cure polyurethane or polyurea adhesive composition having a reactive isocyanate compound, one or more catalysts that are capable of catalyzing the reaction of isocyanate and hydroxyl functional groups in the presence of moisture. The adhesive mixture can also comprise a two component polyurethane or polyurea composition including a reactive isocyanate compound, a polyol or polyamine, one or more catalysts.
